

RODGERS

World Leader in Stereo Imaged Church Organs and Pipe/Digital Organs

Our Company

Welcome ...

Welcome to Rodgers Instruments! We sincerely appreciate your interest in Rodgers and are proud to have this opportunity to tell you the Rodgers story.

Rodgers Instruments is the world's leading builder of organs installed with real winded pipes and the premier builder of cutting edge, stereophonic digital church organs without pipes.

Rodgers is part of the Roland Group of musical instrument companies, headed by Roland Corporation, the world leader in digital musical instrument technologies and digital musical instrument sales and manufacturing.

The Rodgers/Roland partnership means each Rodgers organ is backed by hundreds of engineers specializing in high-resolution stereophonic musical instrument sound generation and all the resources of a recognized industry leader with more than \$700 million per year in digital musical instrument sales. No other company in pipe organ or digital organ building is backed by such a large pool of specialized engineering talent or by financial resources of such a large scale.

The result is professional grade church organs that have become the reference standard among organists and church musicians, worldwide. Rodgers builds world-class church organs, with or without pipes.
